### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

1. This application contains claims 8-10 drawn to an invention nonelected without traverse in Paper No. 9. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 11-37 and 41-47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bone (4,039,078). Bone '078 discloses a length of continuously connected fastener stock comprising: a first and second side members (60A and 60 B); and a plurality of cross-links (60C) interconnecting said first and second side members. The side members have an augmented transverse cross-sectional size. Bone '078 discloses (column 6, lines 17-21 and lines 29-35) that the side members and the cross-links may take many forms such as oval, triangular, octagonal, circular, etc. See Figures 1-9 embodiments.

As admitted by applicant cross-links that have both a flat surface and an arcuate surface are well known in the art. (Figures 1-6 embodiment of the instant application).

Therefore, with respect to the shape and size of the side members and cross-links it would have been an obvious matter of design choice to modify the shape and size of the side members and cross-links in view of the teaching of Bone '078 and

Art Unit: 3728

since such a modification would have involved a mere change in shape and size of a component. A change in shape and size is generally recognized as being within the level of ordinary skill in the art. *In re Dailey*, 357 F.2d 669, 149 USPQ 47 (CCPA 1966) and *In re Rose*, 105 USPQ 237 (CCPA 1955).

With respect to claims 11-18, the determination of patentability in a product-by-process claim is based on the product itself, even though the claim may be limited and defined by the process. That is, the product in such a claim is unpatentable if it is the same as or obvious from the product of the prior art, even if the prior product was made by a different process. *In re Thorpe*, 777 F.2d 695, 697, 227 USPQ 946, 966 (Fed. Cir. 1985).

A product-by-process limitation adds no patentable distinction to the claim, and is unpatentable if the claimed product is the same as a product of the prior art.

#### ***Response to Arguments***

4. Applicant's arguments filed January 26, 2004 have been fully considered but they are not persuasive. As admitted by applicant cross-links and side members that have both a flat surface and an arcuate surface are well known in the art. (Figures 1-6 embodiment of the instant application).

Therefore, with respect to the shape and size of the side members and cross-links it would have been an obvious matter of design choice to modify the shape and size of the side members and cross-links in view of the teaching of Bones '078 and since such a modification would have involved a mere change in shape and size of a component. A change in shape and size is generally recognized as being within the

level of ordinary skill in the art. *In re Dailey*, 357 F.2d 669, 149 USPQ 47 (CCPA 1966 and *In re Rose*, 105 USPQ 237 (CCPA 1955).

Contrary to applicant's argument the side members of Bone ' 078 due in fact have an augmented transverse cross-sectional size.

***Conclusion***

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
